

Matrix Operational Excellence Evaluation (MOrE)

Purpose:

New Capital investment is not always immediately possible. At Matrix Technologies, Inc., we help our clients realize optimum performance of their existing manufacturing processes. We work with you to identify key areas for improvement and help you make the business and technology changes required to meet the challenge.

Our consultants work with clients to document the current state of the manufacturing operations/systems, its features/shortcomings and the desired future state that will meet the client's business needs. Using industry standards and best practices our consultants then develop a strategic vision document for the client that is divided into three sections and is implemented in phased manner:

Approach:

Section 1: Developing attainable business value by interviewing client's personnel and performing a site walk through:

1. Business drivers – Identify what factors drive improvement
2. Estimated value – Identify value of each improvement
3. Operational vision – Identify long and short term goals.
4. New capabilities – Identify new capabilities

Section 2: Detailing the system and operational changes and budgetary costs to deliver new capabilities:

1. Operational/User Requirements Definition
2. Solution components (hardware, software and/or operational)
3. Schedule & Resources needed
4. Acceptance criteria for success

Section 3: Implementing the identified projects to gain immediate operational improvements:

1. Develop & deliver proposal
2. Functional Specification & Detailed Design documentation
3. Development & Testing documentation
4. Training & Transition plans

Value:

This rigorous approach to your needs will quickly identify the most effective use of your limited resources and identify the areas of quickest return on investment. Get your most important projects approved more quickly and implemented effectively! **Get MOrE with Matrix!**
